

How to upgrade the VPS to version 2.8

1. **Check** if you have the correct and latest Java Version (Version 6 upgrade No 30) installed.

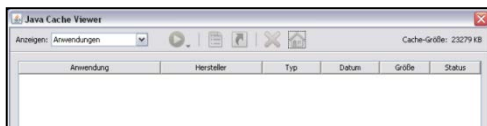

If not download the latest version under: <http://www.java.com/de/download/>

2. Run or execute the program named: javaws –viewer

3. In the Java Cache Viewer, select your current **VPS version (2.7.0.0)** and delete this old one!
To do so, highlight the current version and click on delete (red x).

4. Once the old VPS has been deleted click on the following link **to install the latest (2.8.0.0.) VPS** Version:
<http://dehst.bremen-online-service.de/dehst/vpsmail.jnlp>

5. **Safe the downloaded** file locally and double click to execute the file.
The updated VPS will start automatically. Remember to have your PIN

6. Finally create yourself a **new desktop icon** running the javaws – viewer again. Select the new VPS application and click the right mouse button => create shortcut (which will then appear on your desktop).
